Indexes

Headwords found in the Vocabulary (Chapter 14) appear in the indexes as boldface headwords and as boldface small capitals. Otherwise references to the Vocabulary appear as <14 s.v.>. Major section numbers are given in bold face. Where verbal forms appear in this work exclusively in sections which are in bold face in the Irish Index, those forms are not listed separately in the Irish Index. Neither are those forms listed in the Irish Index which are found exclusively in the Vocabulary under their specific headword. Thus, for instance, in order to review all the forms of the indexed <**breathnaigh, breathaigh**, v, 'look', **1.233, -305, 5.... -304, ... , 1.... -263 ...**> one needs to consult (in addition to the indexed forms) the listed boldface sections; and for <**bacán**>, one needs to consult the Vocabulary also, where the plural form *bacáin* is found but not listed separately in the Index. Underlined English meanings in the Irish Index indicate borrowings found in the English Index. An asterisk is added to historical (Old and Middle Irish and Early Modern Irish) and nondialectal spellings and to forms cited which are not found in my primary sources, e.g. *adéarfainn** and *déarfainn** for dialectal *déarthainn*. Some obviously erroneous dialectal spellings, found in secondary sources, are also asterisked, e.g. (the long vowel in) *át** (for *æ'd*, etc., 2sg prepositional pronoun of *ag*). In short, the asterisk indicates forms not found in primary sources for contemporary Iorras Aithneach.

With variants which are phonetically identical but graphically distinct in the use of the length-mark only, the second variant is placed between round brackets, e.g. <**maidhm** (maídhm)>, both standing for **mi:m'** in all circumstances. Initial mutations and preverbal *d'* are often not reproduced in the indexes. In the verb '3sg' indicates the nonpersonal form, e.g. '3sg *chuirtheadh*' can refer to *chuirtheadh muid*; when no person is indicated the '3sg' can be understood except in the imperative where a lack of indication for person is to be understood as '2sg'. Surnames are listed under the element which follows *de*, *Mac* (*Mag*, 'ac) or *Ó*, e.g. *de Bán* under <**Bán, de**>, *Mhac Dhonncha* under <**Dhonncha, Mhac**>, *Ó Maoil Chiaráin* under <**Maoil Chiaráin, Ó**>. Meanings supplied with entries in the Irish Index act as mere pointers to their semantics.

In the English Index in references to Chapter 11 (Borrowings and language contact) the chapter number '11' is omitted, thus 38 = 11.38. Headwords which are not underlined in the English Index make reference to chapters other than Chapter 11.
